# Dobel Ocean Sky

## The scratch resistant ceiling

Ceiling panels must look good, even after mounting. This has proved to be a problem with regular ceiling panels, since the surface is easily damaged when panels are handled both in the production and on site. Replacing scratched panels causes production delays and unplanned and undesired costs.

This is why we like to talk to you about Dobel Ocean Sky.

Dobel Ocean Sky is a fire classified, decorative and film laminated sheet steel especially developed for ceiling panels. As an alternative material in ceiling panels, Dobel Ocean Sky solves two common problems:

- 1. It's scratch resistant.** Repainting and repairing damaged surfaces is today common practice, but can be eliminated with Dobel Ocean Sky.
- 2. It's colour and gloss stable.** Dobel Ocean Sky won't deviate in colour.

## The good-looking ceiling

If you're looking for ceiling panels with a white lustrous colour that look good from every angle, Dobel Ocean Sky is your choice.

Making that choice gives you a product of highest quality, longer durability and colour stability. It comes with a protective film, that doesn't need to be removed until after mounting, to keep your ceiling in perfect condition throughout the whole process.

## The profitable ceiling

Dobel Ocean Sky doesn't just look better – it's a money-saver, too.

Its durable surface and protective film will help you make substantial savings in terms of rework and casation. The good properties of Dobel Ocean Sky in combination with its low price, makes it a very profitable alternative.

Metalcolour's technical service, delivery precision and ability to deliver just the product volume you need (sheets or coils, min qty: 10 sqm), will help you keep schedules and optimize purchases.
